

## **Well Master Corporation Announces the Release of Plunger Fall Rate Calculator for Iphone**

Updated Application Optimizes Production for Operators of Natural Gas Wells Golden, CO – September 25, 2013 - Well Master Corporation, a manufacturer of patented plunger lift systems used to maximize oil and gas well production, announced the release of their Plunger Fall Rate Calculator 1.0 application for Iphone available now in the Google Play Store. “Well Master is very excited to have created a mobile analytical tool in partnership with the people who know best...our customers. The app is designed to make optimization easier and a lot more efficient.” stated David Green, vice president and COO of Well Master Corporation. The new app is designed for operators of natural gas wells utilizing Well Master plungers for deliquification and production optimization. It calculates the plunger fall rate, the rate at which the Well Master plunger is falling through gas and liquid. Simply select the size of tubing and the Well Master plunger model being used in the well. Then, input the tubing pressure, temperature and the specific gravity of gas and the specific gravity of liquid to determine the fall rate. It eliminates any guesswork and is more accurate and faster than using general rules of thumb. The Plunger Fall Rate Calculator is now available for download at the iPhone App Store and the company is planning for the Android version of the app.

About Well Master Corporation Well Master Corporation’s mission is to engineer and manufacture the most durable and innovative artificial lift systems used to maximize oil and gas well production. The Colorado-based company is the exclusive manufacturer of the patented Viper™ and Venturi Viper™ plungers. For more information please go to [www.wellmaster.com](http://www.wellmaster.com).
