

# Award Winning

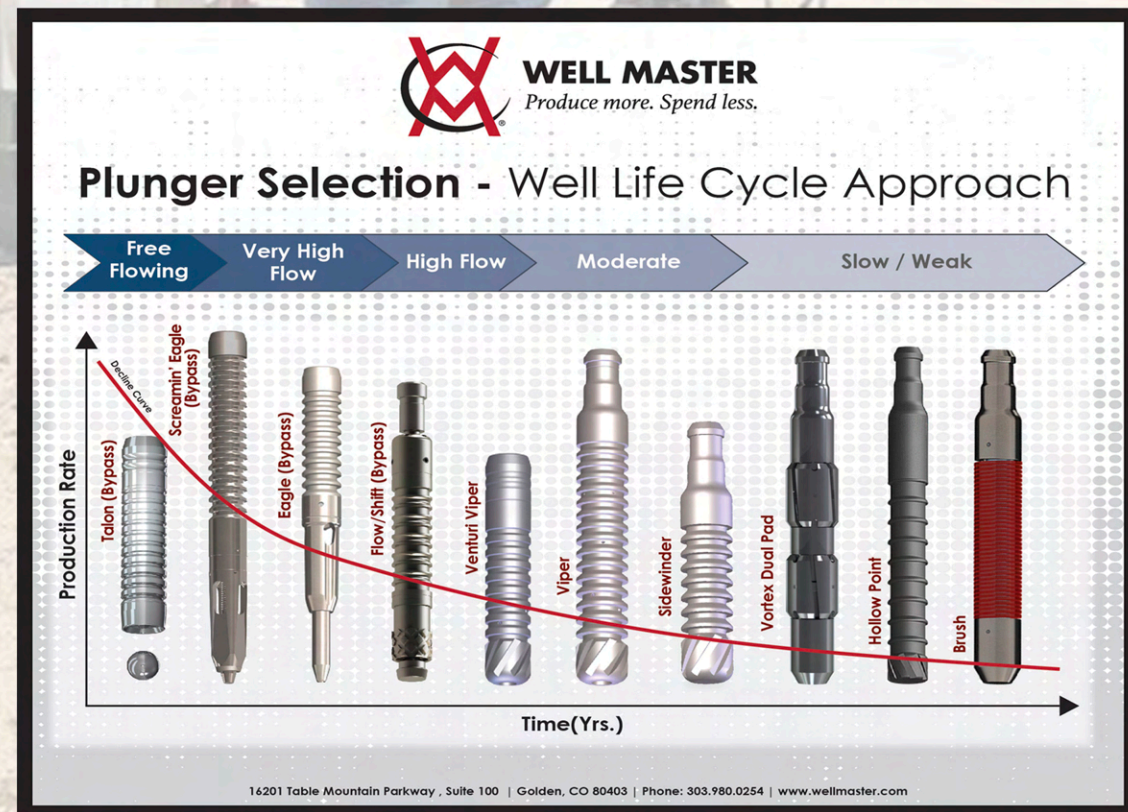

## Winner of the Oil & Gas Awards

- 2015- Rocky Mountain
- 2015- Southwest & Midcontinent
- 2016- Rocky Mountain
- 2016- Texas
- 2017- Northeast
- 2018- Rocky Mountain
- 2019- Texas
- 2019- Rocky Mountain

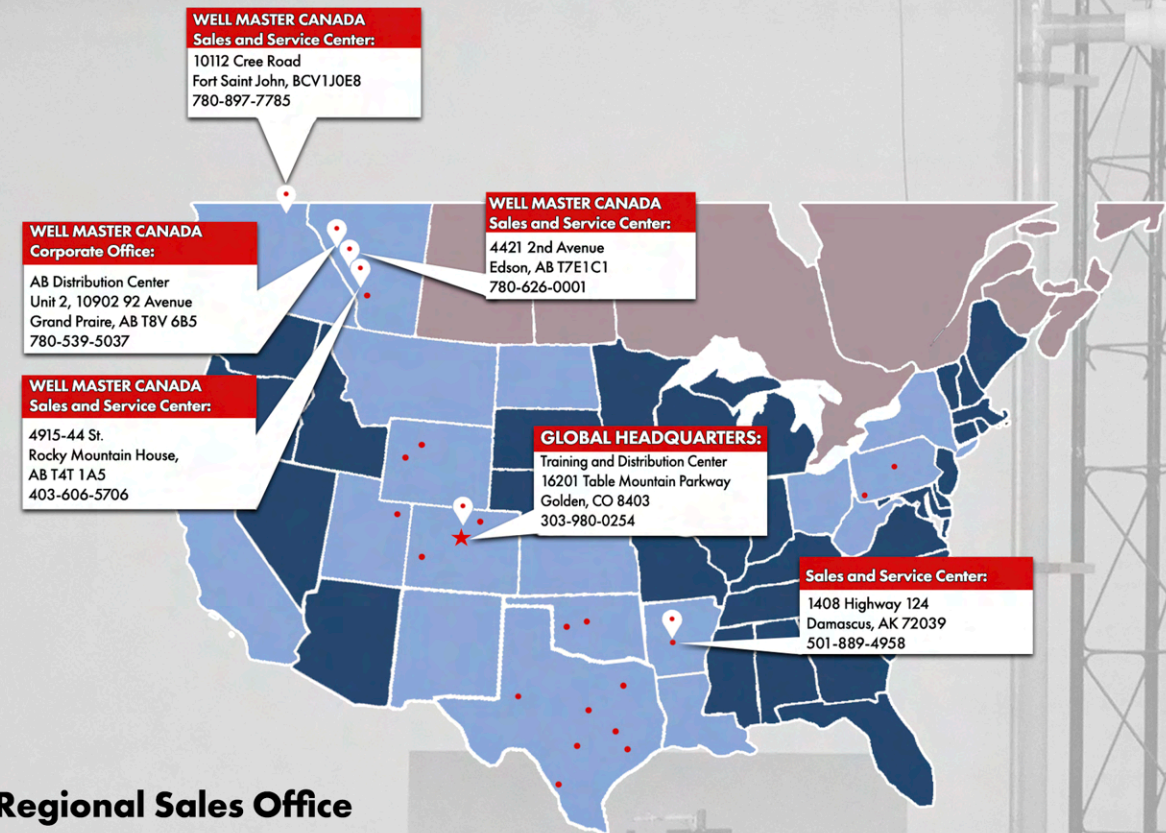

Well Master is focused on solutions for the entire life cycle of your oil and gas well. With no intervention or improper intervention, wells will underperform compared to the expected decline rate. Well Master's range of plungers are designed to optimize the well through its entire life. Our goal is to help you maintain production at optimum levels.

# Global Reach

Contact Well Master today to find out how we can help optimize your oil and gas well production.

# WELL MASTER

*Produce More. Spend Less.*

## About Well Master

Well Master Corporation was founded in Denver, Colorado in 1984 with the mission to engineer and manufacture the most durable and innovative artificial lift systems available. Well Master focuses on enhancing oil and gas well production to provide Exploration & Production Operators practical means to maximize well efficiency and extend well life.

Today, Well Master provides a range of proven products and solutions designed to optimize oil & gas well operations. The Well Master line of patented, premium plungers (including the original Viper and Venturi Viper plunger) are recognized industry-wide for their superior performance and exceptional durability. Our ongoing research and development bring new international patented technologies and applications that are back by Computational Fluid Dynamics (CFD) programs and Aerospace Engineering to optimize well performance.

To facilitate the use of advanced technology above, Well Master launched a groundbreaking Fall Rate Calculator App that is utilized throughout the oil & gas industry. It is designed to make well optimization a lot easier and more efficient by calculating plunger fall times to bottom, based on the fall rate at which the Well Master plunger travels through gas and liquid.

Well Master products and services translate into higher levels of productivity and less downtime. The total cost of ownership is less than any other brand of artificial lift available today.

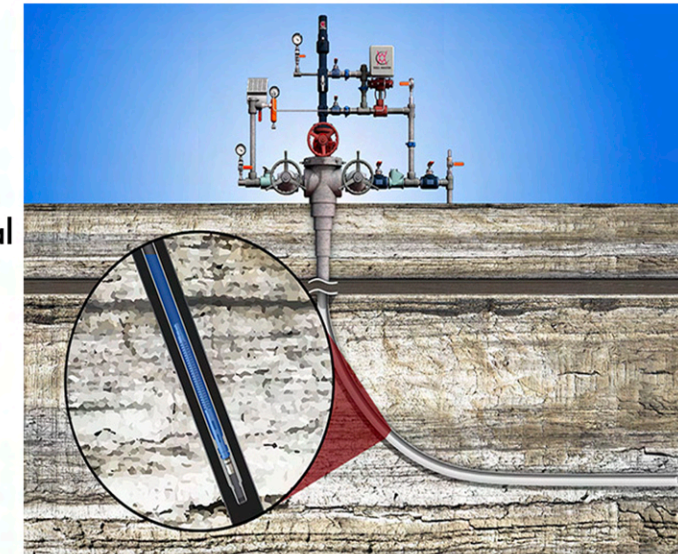

Well Master. Produce more. Spend less.

## Horizontal Well Solutions

### Leading the Industry in Horizontal and Deviated Well Solutions

Traditionally, plunger lift has been used in vertical oil and gas well production. However, today's operators need an all-inclusive solution including horizontal and directional wells. Well Master's Dynamic and Mechanical Seal Technology utilizing on board 'jets' was developed as a solution for horizontal and directional wells to enhance seal efficiency and effectiveness.

Well Master provides specific horizontal and directional well solutions that result in incremental production. Well Master emphasizes the importance of our applications engineering services to minimize trial and error and maximize cash flow via production uplift. Positive results from thousands of wells validate this approach. Well Master remains the only plunger company in the industry that approaches your well with an engineered solution.

### Training, Service & Support

Using the theme "Every Well is a Business", Well Master helps producers go beyond simple cost-cutting as a way to boost net revenue. Well Master works with you to fuse classroom instruction with field performance, leading to the creation of best practices. The results will reward your effort with increased revenue-often in millions of dollars!

Learn It

Well Master provides formal classroom training to teach your team the fundamentals of artificial lift. This class will benefit anyone in your company looking to better understand how to get the most from your wells.

Do It

Well Master engineers come to you to help evaluate the performance of 10-30 wells, providing your team with hands-on experience based on the fundamentals learned in the classroom.

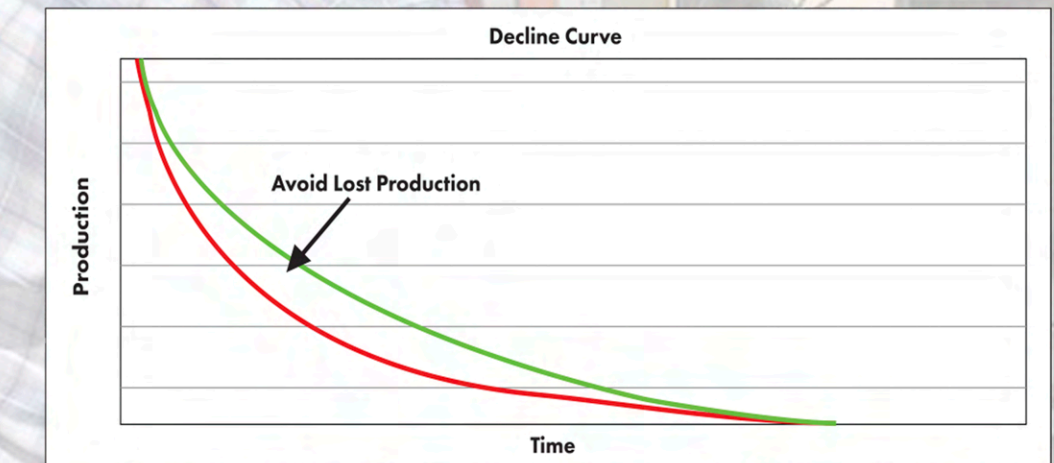

Teach It

In this final step, Well Master works with you to form best practices for your company, allowing your company to continue to pass along and benefit from what you have learned in our program.

## Increase Production, Reduce Your LOE

### Produce More-

- Specific plunger designs for vertical, horizontal and directional wells
- Optimized designs validated by CFD modeling
- Reduced down time due to superior metallurgy
- Continuous new innovation and new product development
- Partnerships with operating companies to develop superior products
- Dedicated schools and training programs
- Operating at or above the well's natural decline curve extends the financial life of assets and keeps the reserves on the books.

### Spend Less-

- CFD design technology leads to reduced wear
- Unique advanced metallurgy extends usable life of plungers by approximately 3 times
- Fewer plungers change outs per year leading to fewer trips to the well head
- Reduced production loss due to plunger wear
- Long life plungers require less operator attention and maintenance
- Return on Investment (ROI) measured in days, not months or years
